

## TIERED DRUG FORMULARY

A Tiered Drug Formulary is a list of medications to be used as a guideline for physicians when prescribing medications and is designed to help keep your prescription drug benefit affordable. It also informs you of the availability of generic or less-expensive drugs, which often can reduce your out-of-pocket costs.

First (1<sup>st</sup>)-tier drugs are generic medications and are available at the lowest copay. First-tier drugs are in lower case letters (ex. isoniazid). Most generic medications are considered formulary even if they are not listed.

Second (2<sup>nd</sup>)-tier drugs are brand name medications which are capitalized on the tiered drug formulary and do not indicate a generic is available (ex. LAMISIL TABS).

Third (3<sup>rd</sup>)-tier brand name drugs are followed by *–GENERIC* (ex. NIZORAL- *GENERIC*) or are brand name drugs not listed on the formulary.

Note: If you request a brand name drug which has a generic equivalent, you may be responsible for paying your copay plus the price difference between the generic and equivalent brand name drug. As brand name drugs become available generically, only the generic will be considered formulary. Not all drugs listed may be covered by your prescription drug benefit. In addition, certain restrictions, quantity limits or prior authorization requirements may apply.

We encourage you to present this tiered drug formulary to your physician each time a prescription is written. This will help avoid delays or inconvenience when you take your prescription to your pharmacy. Please contact a MaxorPlus Customer Service Representative if you have any questions at 806-324-5430 or 800-687-0707. For the most up to date MaxorPlus Tiered Drug Formulary, go to [www.maxorplus.com](http://www.maxorplus.com) and click on formulary listings under common questions or go to <http://maxsource.maxor.com/maxorplus/formulary.aspx>.
